Reasons for Allowance

The instant application is directed to a process for *in situ* preparation of chiral compounds from oxazaborolidine borane complexes, wherein a metal borohydride, a Lewis base and an inorganic acid ester are mixed and an optically active amino alcohol are added. The complex obtained is useful for asymmetric reduction reactions. The closest prior art is to Carroll et al, U.S. Patent No. 5,264,574. Carroll et al teach a process for preparing oxazaborolidine

borane complex of Formula

by reacting dimethyl sulfide and

gaseous diborane with a solution of oxazaborole. The instantly claimed process is directed to *in situ* preparation of chiral compounds. Nothing known in the art anticipates or renders the process as described in this application obvious. Therefore, claims 23-47 are allowed.
